Advisory for the Orchardists of Valley

For the Management of Woolly apple aphid:

- Remove twigs infested with Woolly apple aphid and apply Chaubatia paste on cut areas.

For the Management of Apple stem borer:

- Cleaning of borer infested holes.
- Heavily infested branches and completely dried trees should be uprooted, removed from the orchard and burnt.
- Insertion of petrol-soaked cotton, deep in the holes of apple tree, followed by plastering with mud+husk containing Chlorpyrifos 1.5% DP @ 6:1 ratio after thoroughly mixing husk. **OR**
- Inject Dichlorvos 76 EC @ 3.0 ml/ lit. of water deep inside the holes, followed by plastering of holes with mud and Chlorpyrifos 1.5% DP as mentioned above. **OR**
- Use of Celphos tablets @ one tablet/hole followed by plastering, as mentioned above. Apply little water while inserting Celphos tablets inside the holes.
